

PERFECTLY CLEAN - FOR SURE

THE ECONOMIC

## TIGHT TIME FOR STRIPPING? NOW FASTER WITH THE NEW CORRIDOR® TOP STRIPPER S 715!

Time is money, and this becomes particularly apparent during basic cleaning of floor coverings using conventional wet stripping methods. Buzil has the solution! The fast floor cleaner **Corridor® Top Stripper S 715**.

- Whether for removing the upper coating wear layer during top stripping process or for preparing the coatings for first and second coating
- Suitable for all waterproof (also alkali-sensitive) elastic floor coverings as well as natural and artificial stone or sealed wood
- Strong cleaning power with equally excellent material compatibility (pH 9)
- Works quickly and efficiently
- For mechanical intensive cleaning using a single-disc or scrubber-dryer and suitable pad
- No rinsing necessary
- Two-stage wet wiping with water is sufficient to prepare the coating for a new coat after the dirty water has been picked up
- Leaves a pleasant fragrance
- 1-litre and 5-litre containers available

STRIPPER

## TOP STRIPPING PROCESS

# BREATHES NEW LIFE INTO HEAVILY USED FLOORS.

The top stripping process is a, fast, modern and inexpensive method used for full-surface rehabilitation of coated elastic floor coverings and can be used instead of conventional wet stripping.

### REQUIREMENT

- ✓ The care film layer must still be completely sealed
- ✓ Use at least two to three coats as a base

### PROCESS

- ✓ Grind surface damage using the wet scrubbing process with a single disc or scrubber-dryer and suitable pad using Corridor® Top Stripper S 715 (500-1000 ml / 10 l water)
- ✓ Pick up the dirty water with a wet vacuum cleaner and then wet-wipe the surface twice with clean water

### GOAL

- ✓ A full-surface matt coating without visible signs of wear (scratches etc.)
- ✓ Then re-coat the entire surface, preferably with the same coating, over the sanded care film, in to obtain a fresh appearance

### ADVANTAGES OF THE TOP STRIPPING PROCESS

- ✓ Excellent material compatibility
- ✓ Quick and efficient
- ✓ More cost-effective since fewer people are required
- ✓ No rinsing necessary
- ✓ Complete stripping or thorough cleaning can be postponed

However, top stripping also has its limits. The procedure does not work if the care film is too thin, the care films show signs of heavy wear (scratches etc.) up to the floor covering. or in the case of old, yellowed care films with dirt deposits down to the base layer.
